

## Pier ESG 40

The Pier ESG 40 Portfolio is designed for clients wishing to invest using Environmental and Social criteria to underpin the construction of their investment portfolios. In building the portfolio, Pier Financial Investments has remained faithful to our core belief that tracking markets is the most efficient method of delivering returns for our investors and an important part of keeping costs to a minimum. This approach has led us to seek out newly emerging indices which have evolved to screen out or reduce the impact of social and environmentally harmful sectors in favour of positive and sustainable sectors such as renewable energy. The Pier ESG 40 has a 40% equity content and invests in traditional assets such as global equities using a range of selection or screening criteria to reduce the flow of capital to companies and activities that are deemed to have a negative impact on the environment, or more broadly on society.

Currently the ESG screening is only applied to the equity content of the portfolio as we see higher risks in the fixed interest element due to both sector concentration and lower investment grade. It is the intention to gradually introduce ESG screened bonds as we see these risks decline.

**Investors should be aware that the value of their investments and the income from them can fall as well as rise and investors may not receive back the full amount they invest. Past performance is not a reliable indicator of future results.**
