

PIER Multi Asset Portfolio

The PIER Multi Asset Portfolio is allocated between three asset classes, equity and fixed interest securities, and gold using tracker funds. The value of investments in this portfolio is split 35% equity, 50% fixed interest and 15% physical Gold. The equity in this portfolio aims to track global stock markets with some additional weighting to the UK; equities are likely to have higher volatilities and hence contribute more to portfolio risk compared to the fixed interest allocation. The fixed interest aims to mirror an appropriate global mandate for a sterling investor, utilising UK government gilts, global sovereign bonds and corporate bonds to moderate the equity returns. This helps to underpin values in poor markets, further supported by the addition of gold which tends respond positively in extreme market corrections or downturns.

Investors should be aware that the value of their investments and the income from them can fall as well as rise and investors may not receive back the full amount they invest. Past performance is not a reliable indicator of future results.
